## **RIIMPO317F Conduct roller operations**

A roller is a self-propelled or towed machined used for the primary purpose of compacting a variety of types of construction materials. It may be rubber tyred, smooth drum, padded drum or grip (open) face type

Conduct Roller Operations is a nationally recognised unit of competency that will give you the skills to operate a roller of compactor on roads (subject to TMR regulations), a construction site, farms or building site.

It includes: planning and preparing; conducting machine pre-operational checks; selecting, removing and fitting attachments; operating and relocating the machine; and carrying out operator maintenance and finally clean up.

A nationally recognised statement of attainment will be issued to students on successful completion of the course along with a wallet sized card.
