RIIMPO337E Conduct articulated haul truck operations

Articulated haul trucks are large pieces of heavy machinery which are used to transport large amounts of loose materials like dirt, sand, gravel and demolition waste. They're used on civil and major construction sites and on mining sites too.

Our nationally recognised articulated haul truck operations course will give you the knowledge and skills to confidently operate a haul truck in the civil and mining construction industries. The purpose-built rough terrain haul truck is one of the most common dumps/haul truck you will see in the industry. Operation of a haul truck will see you utilizing the machine to its full capacity on many work sites loading, hauling and dumping materials.

On successful completion of the course you will receive a Statement of Attainment that is a nationally recognised competency for these units along with a wallet sized card.
